

Taboga Islands

2022

Case Study

Solution for Drinkable Water
in Islands

Background

The units were supplied to the residents of the Taboga Islands as a solution to the access of fresh, clean water on the island

Taboga Island is a tourist island
located in the Gulf of Panama
20 km from Panama City
With 2,000 inhabitants

Challenge

Taboga Islands, suffering access to fresh water, despite the fact they currently have a water purification plant with a capacity for 100,000 gallons of water, however, this plant have several different damages and the system does not work continuously which causes a shortage of water supply to residents.

Water security is an enormous challenge!

Solution by GALMOBILE™

- 💧 The GALMOBILE can provide, in a few minutes, safe drinking water.
- 💧 Simple to operate and Use.
- 💧 Approved by WHO water standards
- 💧 Compliance with the Ministry of Health of Panama

Results of using the GALMOBILE™

Parameter	Description
Reducing logistics costs	No need for water transportation
Local labor force / Job creation	No need for a professional/engineer at site
Improve Lives	100% availability & reliability in supplying safe water

The operation and delivery were both executed successfully and to the complete satisfaction of the Ministry of Health in Panama.
